### 1 Case selection and data gathering

- See pre-analysis plan for details of what to include in this section
- Case selection (why focus on the UK?)
  - I am to have external validity to my research/case?
  - Can I make inferences to other cases?
- What is the case?
  - What is the unit of analysis?
  - What is the time period?
  - What is the geographical scope?
  - What are the key variables?
- What data is being collected?
- How is the data being collected?
  - What is the sampling strategy?
  - Note the UK weighting
- Plan for using agentic modelling
  - Why would I use agentic modelling?
  - What is the agentic modelling?
  - How will I use agentic modelling?

## 2 Data analysis

The survey experiment was facilitated by YouGov across a representative sample of 2,001 UK adults. The sample of participants was drawn from YouGov's panel and weighted to be representative of the UK population.

#### 2.1 Thermometer Analysis

#### 2.1.1 Moderator Heterogeneity Analysis

#### 2.2 Outcome Variable Analysis

#### 2.2.1 Moderator Heterogeneity Analysis

# 3 Appendix

## 3.1 Codebook

Variable	Type	Description	Values
identity_client	Identifier	Unique identifier for the respondent	Alphanumeric string
weight	Continuous	Survey weight to ensure national representativeness	Continuous float (e.g., 0.982, 1.034)
age	Continuous	Age of the respondent	Integer values, typically 18–90
profile_gender	Categorical	Gender of the respondent	Female; Male
profile_GOR	Categorical	Government Office Region (region of residence)	East Midlands; East of England; London; North East; North West; Scotland; South East; South West; Wales; West Midlands; Yorkshire and the Humber
voted_ge_2024	Categorical	Did the respondent vote in the 2024 General Election?	Don't know; No, did not vote; Yes, voted
pastvote_ge_2024	Categorical	How the respondent voted in the 2024 General Election	Conservative; Don't know; Green; Labour; Liberal Democrat; Other; Plaid Cymru; Reform UK; Scottish National Party (SNP); Skipped
pastvote_EURef	Categorical	How the respondent voted in the 2016 EU Referendum	Can't remember; I did not vote; I voted to Leave; I voted to Remain
education_recode	Categorical	Re-coded education level (grouped)	High; Medium; Low
<pre>profile_work_stat</pre>	Categorical	Employment status	Full time student; Not working; Other; Retired; Unemployed; Working full time (30+ hrs); Working part time (8-29 hrs); Working part time (<8 hrs)
political_attention	Continuous	How much attention the respondent pays to politics	Scale (e.g., 0–10 or continuous values)

Variable	Type	Description	Values
split	Categorical	Randomly assigned treatment group (1–4)	1 = AI-generated, not labelled as AI-generated; 2 = AI-generated and labelled as AI-generated; 3 = Human-generated but labelled as AI-generated; 4 = Human-generated, not labelled as
xconsent	Categorical	Consent to participate in the survey	AI-generated I consent to taking part in this study; I do not wish to continue with this study
mostlikely	Categorical	Most likely party to receive vote	Conservative Party; Green Party; Labour Party; Liberal Democrats; Reform UK
leastlikely	Categorical	Least likely party to receive vote	Conservative Party; Green Party; Labour Party; Liberal Democrats; Reform UK; None of these; Not Asked
MLthermo_KB	Continuous	Thermometer rating for Kemi Badenoch (most likely party)	0–100
MLthermo_KS	Continuous	Thermometer rating for Keir Starmer	0–100
MLthermo_NF	Continuous	Thermometer rating for Nigel Farage	0–100
MLthermo_ED	Continuous	Thermometer rating for Ed Davey	0–100
MLthermo_CD	Continuous	Thermometer rating for Carla Denyer	0–100
MLthermo_AR	Continuous	Thermometer rating for Adrian Ramsay	0–100
LLthermo_KB	Continuous	Thermometer rating for Kemi Badenoch (least likely party)	0–100
LLthermo_KS	Continuous	Thermometer rating for Keir Starmer	0–100
LLthermo_NF	Continuous	Thermometer rating for Nigel Farage	0-100
LLthermo_ED	Continuous	Thermometer rating for Ed Davey	0-100

(continued)

Variable	Type	Description	Values
LLthermo_CD	Continuous	Thermometer rating for Carla Denyer	0–100
LLthermo_AR	Continuous	Thermometer rating for Adrian Ramsay	0-100
agreedisagree	Ordinal	Agreement with statement shown in the survey	Strongly disagree; Tend to disagree; Neither agree nor disagree; Tend to agree; Strongly agree
xtrust	Ordinal	Level of trust in the content shown	Almost never; Once in a while; About half of the time; Most of the time; Always
child	Ordinal	Respondent's emotional reaction to child-focused content	Extremely upset; Somewhat upset; Neither happy nor upset; Somewhat happy; Extremely happy
MLthermoMean	Continuous	Average thermometer score for most likely party	0–100 (row mean of MLthermo scores)
LLthermoMean	Continuous	Average thermometer score for least likely party	0–100 (row mean of LLthermo scores)
ai_treatment	Binary	Treatment status for AI-generated content	1 = Treated (shown AI-generated); 0 = Control (shown human-generated)
label_treatment	Binary	Treatment status for AI-labelled content	1 = Treated (labelled as AI-generated); $0 = Control$ (labelled as human-generated)

#### 3.2 Data Cleaning

2,001 respondents were provided with the survey experiment. Respondents who did not give consent to participate in the survey were removed. Respondents were given the option to skip questions. When skipped, a value of 997 was assigned to the question, which was then recoded to NA, as were Not asked values.

The survey was interested in understanding respondents' views towards their most and least preferred party. When asked who the mostlikely and leastlikely party was, respondents were given the option to select None of these. Respondents who selected None of these were removed from the sample as they were

unable to answer the follow-up questions.

Categorical variables were recoded to be factors in R, these were profile\_gender, profile\_GOR, voted\_ge\_2024, pastvote\_ge\_2024, pastvote\_EURef, profile\_education\_level, education\_recode, profile work stat, xconsent, mostlikely, leastlikely, agreedisagree, xtrust, and child.

Each of the thermometer variables were recoded to be numeric variables: MLthermo\_KB, MLthermo\_KS, MLthermo\_NF, MLthermo\_ED, MLthermo\_CD, MLthermo\_AR, LLthermo\_KB, LLthermo\_KS, LLthermo\_NF, LLthermo\_ED, LLthermo\_CD, and LLthermo\_AR. As the Green Party has two co-leaders, a mean thermometer score is calculated and used for most and least likely party thermometer scores, coded as MLthermoMean and LLthermoMean.

For treatment effect analysis, respondents were classified into two treatment groups: those shown AI-generated content (ai\_treatment), identified where the split variable equalled 1 or 2; and those shown AI-labelled content (label\_treatment), identified where the split variable equalled 2 or 3. Participants in the other split groups were coded as receiving human-generated or unlabelled content. These variables were coded as binary variables, where 1 indicated the treatment group and 0 indicated the control group.

#### 3.3 Balance Check

To ensure that the randomisation process of the treatment allocation was successful, a balance check is conducted to ensure that the treatment and control groups are comparable in every way other than their treatment assignment status. The tables below report the balance of the covariates across the treatment groups. The continuous variables of age and political\_attention are reported as means with the standard deviations in parentheses. The remaining categorical variables are reported as a count from the sample, with the proportions in parentheses. If there was a significant difference between the treatment and control groups, this is indicated with a \* for p < 0.05, \*\* for p < 0.01, and \*\*\* for p < 0.001. The balance check shows that randomisation was successful across all covariates for both treatment groups as no covariates were significantly different between the treatment and control groups.

Table 2: Balance Table of Covariates by AI Treatment Group

Variable	Control	Treatment	p-value	Signif.
Age Political attention	52.12 (16.74) 6.69 (1.92)	51.56 (16.75) 6.61 (1.98)	0.521 0.452	-
